

MEDIA RELEASE

COMPRESSED AIR LEADERS RELEASE NEW LOOK

Compressed air is a complex and potentially confusing field, with customers often unsure of what information is reliable and what is sales spin.

Get the right answers from Compressed Air Australasia – the new name behind the Compressed Air Association of Australasia and its updated Protocol 2000+.

www.compressedair.net.au / www.compressedair.net.nz is your source for impartial information on the technical background behind compressor selection, energy efficiency, and how to make choosing a compressor easy.

The key to meeting your compressed air needs is to look for the unit of Free Air Delivery or FAD on the unit. When measured according to the Protocol 2000+, this is the most accurate way to nominate the output of a compressor. Look for this label when you buy.

To find out more about the Protocol 2000+, and the participating brands, go to the new website at www.compressedair.net.au / www.compressedair.net.nz.
